O'BrienEngineering, Inc.

specializing in the complex™

Federal Experience

Celebrating over 30 years since our founding in 1987, OEI serves our federal customers nationwide and overseas through five primary business lines: facilities, infrastructure, water resources, real estate, and support services.

Service Disabled Veteran Owned Small Business

STATEMENT OF QUALIFICATIONS: FEDERAL EXPERIENCE

COMPANY OVERVIEW

Founded in 1987 in North Texas, O'Brien Engineering, Inc. (OEI) was originally established as a specialty civil engineering firm, primarily solving surface water issues - including drainage, flooding, dam/levee, and forensics - in our geographic region. Because of our niche services, we worked for a variety of customers on a range of project types as both a prime and subconsultant. This project, customer, and role diversity afforded OEI the benefit to master our project management protocols and procedures, emphasis on quality at every level, and team and customer communications. Beginning in 2004, our expertise, combined with our management proficiencies and efficiencies, led us to subconsultant opportunities within the federal sector. In 2012, OEI became a certified Service Disabled Veteran Owned Small Business (SDVOSB) and began serving as a prime consultant shortly thereafter.

Today, OEI is a multidiscipline engineering and environmental firm with capabilities in architecture and support services. We serve our federal customers nationwide and overseas. And we remain focused on providing our customers with high quality design and support services in a timely and cost-effective manner. In turn, our customers have consistently given us Exceptional and Very Good CPARS ratings, as well as follow-on contracts and task orders. This work and our overall federal capabilities fall into five broad categories: facilities, infrastructure, water resources, real estate, and support services.

OEI's **core values** are ownership, teamwork, continuous improvement, competence, and ethical behavior. Our purpose and passion is solving our customer's problems; we empathize with our customers, analyze and solve the problem, then deliver the solution. We truly listen to people to really understand the problem and then deliver a thoughtful, comprehensive solution.

FEDERAL BUSINESS LINES

OEI's federal business lines are across five broad areas:

- Facilities
- Infrastructure
- Water Resources
- Real Estate
- Support Services

Our facilities experience is almost exclusively as a prime consultant and includes full Architecture/Engineering (A/E) design and drawing preparation – mechanical/electrical/plumbing (MEP), civil, structural, architectural, cost estimating, etc. – A/E studies and analysis, facility condition assessments, construction phase services, and design-build (D-B) RFP preparation. Serving as both a prime and a subconsultant, our infrastructure project experience includes roads, utilities, parking facilities, and site development services providing full design and drawing preparation, construction administration and construction phase services, and permitting and permitting coordination. For projects involving water resources, OEI is likewise involved as both a prime and subconsultant, and our experience includes complex hydraulic, hydrologic, and hydrodynamic modeling (1-D and 2-D), analysis, design, and reviews for a variety of projects including dam and levee safety and rehabilitation, floodplain management and administration, drainage structures and facilities, and stream/creek/slope stabilization. OEI's real estate capabilities include property and deed research, easement determination, title and closing services, acquisition, negotiation, mapping and GIS support, and surveying. Finally, our support services involve a mix of experience and capabilities including staff augmentation, surveying, project management, and Independent External Peer Reviews/Independent Technical Reviews.

FEDERAL CUSTOMERS

OEI's first federal client was the Department of Defense's US Army Corps of Engineers (**USACE**) Southwestern Division's Fort Worth District in 2004. Today, we continue to serve not only the Fort Worth District but also other Divisions and Districts

both as a prime and a subconsultant. Over the years, due to our past performance and exceptional and very good CPARS ratings, we have served (and continue to serve) the Department of Veterans Affairs (**VA**) across multiple VISNs and multiple states, the Department of Homeland Security's Federal Emergency Management Agency (**FEMA**) and Customs and Border Protection (**CBP**), military installations (**Lackland AFB, Fort Sam Houston, Laughlin AFB**), and the Department of Agriculture's (**USDA**) Forest Service.

FEDERAL IDIQ/MATOC CONTRACTS

In addition to multiple single project contracts, OEI currently holds two long-term contracts as a prime:

- USACE Fort Worth District Engineering and Construction Support Office A/E IDIQ, SDVOSB Set-Aside, \$15M Capacity – W9126G-15-D-0011
- USACE Tulsa District A&E Services for Horizontal Design, \$65M MATOC – W912BV-20-D-0004 (OEI-Etegra JV)
- VISN22 A/E MATOC, AZ, NM, CA, \$20M Capacity – 36C258D00047 (OEI-LBL JV)
- VISN17 A/E MATOC, TX, \$25M Capacity – 36C25720D0060
- Joint Base San Antonio (JBSA) A&E MAC IDIQ – \$67M Capacity, Randolph AFB/Fort Sam Houston TX. Contract number FA301620D0017
- USACE Fort Worth District Real Estate Division Real Estate Support Services MATOC, SDVOSB Set-Aside, \$40M Capacity (Shared Among Two Firms) – W9126G-17-D-0028
- USACE Fort Worth District Real Estate Title and Curative Services BPA, Southern Border – W9126G-19-A-0030
- VISN 17 Central Texas Health Care System A/E Short Selection Database

KEY PERSONNEL

President: Jim O'Brien, PE, CFM, F.SAME. Founder of OEI, Mr. O'Brien has 40 years of experience within the engineering and design industry; he has dedicated his career to the management, planning, design, analysis, and study of engineering and multidiscipline projects. He has served as Program Manager, Principal-in-Charge, and/or Senior Project Manager on numerous federal contracts and task orders serving USACE, VA, FEMA, CBP, and Forest Service. He holds a BS in Civil Engineering, Hydraulics/Hydrology emphasis, from Texas Tech University and has 30 hours toward an MS in Civil Engineering, Water Resources. Mr. O'Brien is a registered Professional Engineer (Civil), Certified Floodplain Manager, and Society of American Military Engineers (SAME) Fellow who is currently serving as the TEXOMA Regional Fellows Point of Contact.

Vice President, Operations / Senior Project Manager: Garry Kraus, PE, MBA. Mr. Kraus serves as our company's Vice President of Operations as well as Senior Project Manager. A seasoned project management and senior engineer, Mr. Kraus has over 40 years of experience providing engineering design and management experience on projects ranging from alleys and minor roadway design to pedestrian trail design, to thoroughfare reconstruction. Mr. Kraus has an established a reputation for understanding client needs through excellent communication initially and throughout project delivery. He holds an MBA from the University of Houston and an MS in Civil Engineering/Sanitary Engineering and BS in Civil Engineering from the University of Maine. He is a registered Professional Engineer (Civil).

Vice President, Finance / Special Projects Manager and Senior Engineer: Joe O'Brien, PE, MBA. Joining OEI in 2017, Mr. O'Brien spent nearly 12 years in the aerospace engineering industry and now directs the company's financial matters as well as specific special project management and client development. At his previous position he served as Director of Engineering and Military Programs, responsible for engineering direction, military business development, and military program management. He holds a BS in Mechanical Engineering from Baylor University and an MBA from the University of Texas at Arlington. Mr. O'Brien is a registered Professional Engineer (Aeronautical/Aerospace).

Federal Project Manager / Senior Civil Engineer: Jim Lyles, PE. With 20 years of experience as an engineer and project manager and a strong reputation as an effective federal project manager on DoD, DHS, and military installation projects, Mr. Lyles offers a proven understanding of the requirements necessary to produce quality deliverables on schedule and within budget. His management experience ranges from civil site, transportation, aviation, utility design, architectural design, facility rehabilitation, MEP systems design, master planning, and more. A registered Professional Engineer (Civil), Mr. Lyles has an ME in Civil Engineering and a BS in Civil Engineering.

Water Practice Leader / Senior Hydrologist: Gerardo Ocañas, PhD. Dr. Ocañas offers over 35 years of experience in project management, including projects involving other prime contractors, subcontractors that necessitate the interaction with federal, state, county and city governments, as well as community leaders and other interested stakeholders. Dr. Ocasan mastery and fluency of the Spanish language and his ability to professionally communicate verbally and in writing has proven a powerful and vital instrument of communication in getting local people actively involved. Dr. Ocañas experience comprises many fields of civil engineering and water resources. His most recent expertise includes two-dimensional (2D) hydraulic simulation of complex drainage, river, stormwater and wastewater collection systems using leading edge technologies such as InfoWorks, SWMM, HEC computer programs, and others. He has a PhD in Civil-Water Resources Engineering, MS in Civil-Environmental Engineering, and BS in Civil Engineering.

MEPF Manager / Senior Mechanical Engineer: Mary Azad, PE, LEED AP. Ms. Azad's background includes nearly 20 years of experience in mechanical engineering and HVAC design including plumbing and fire protection direction and oversight in the federal, healthcare, and industrial sectors. Her experience includes design for a variety of retrofit and new installation projects. A registered Professional Engineer (Mechanical), Ms. Azad has an MS and BS in Mechanical Engineering.

Senior Project Manager / Senior Environmental and Civil Engineer: Craig Bond, PE. Mr. Bond offers 40 years of experience in civil and environmental engineering project management on project types including railroad, roadway, site development, and on environmental cleanup sites. He provides construction management and project management of a variety of construction types. A registered Professional Engineer (Environmental), Mr. Bond has a BS in Civil Engineering.

Senior Water Resources Project Manager: Kimberly Cornett, PE, CFM, F.ASCE. Ms. Cornett brings depth and experience in with over 20 years of experience in drainage design, floodplain management, and site development throughout the varying regions and topographies of Texas. A registered Professional Engineer (Civil) and Nationally Certified Floodplain Manager, she brings passion for and understanding of infrastructure improvements combined with policy change and guidance through her role in ASCE Fort Worth Branch – Texas Session as Director. She holds an MS in Civil Engineering and Water Resources and a BS in Hydrology and Water Resources.

Vice President, Business Development: Sarah Cole, MBA, F.SAME. Ms. Cole has been with OEI since 2000 and leads our company's business development and marketing initiatives. Her focus is on cultivating, maintaining, and serving federal customers, responsible for client relationship development, pursuit capture management, and proposal strategy, preparation, and execution. She holds a BBA in Entrepreneurship from Baylor University and an MBA from the University of Dallas.

In addition to OEI's leadership and management team, our staff includes Professional Engineers (Civil, Mechanical, Electrical, Aeronautical, Environmental), GIS specialists, Certified Floodplain Managers, title examiners/landmen, and administrative personnel.

USACE FORT WORTH DISTRICT (SWF) WATER CONTROL MANUAL DEVELOPMENT: AQUILLA, NAVARRO MILLS, OC FISHER, BARDWELL, SOMERVILLE (TEXAS)	USACE Fort Worth District	2017 – Current
		
<p>OEI is updating the Water Control Manuals for five of the 28 lakes/dams operated by the Southwestern Division's Fort Worth District. The manuals provide the water control plan describing how the dam is to be operated regarding flood control, hydroelectric power, and emergency action plans (EAPs). The water control chapter is produced by USACE. The remaining chapters provide a description and history of the dam project. They also include pertinent data about the dam such as watershed characteristics, data collection and communication networks, and hydrologic forecasts. For these chapters of the manual, we are responsible for authoring chapters, creating graphs, plots, maps, tables, research, editorial support, printing, and preparation of electronic and paper documents.</p> <p>OEI's contract includes a base period and four options; Aquilla Lake was the base period and Navarro Mills Lake has been exercised. As of November 2017, the remaining manuals, to be exercised as funding becomes available, include OC Fisher, Bardwell, and Somerville.</p> <p>The existing manuals for each lake vary in age and quality. Some of the manuals have not been updated since the project was completed and date as far back as the 1950's while others were updated as recently as 10 years ago.</p> <p>To produce plates relating to hydrologic data, OEI utilized ArcGIS, including the latest PMP/PMF report produced by USACE for the area, rain and streamflow gage locations, the hydrologic network, and travel times. Other plates included hydraulic data for the dam such as outlet works rating curves, spillway rating curves, lake evaporation curves, area and capacity curves, spillway design flood, and elevation capacities. OEI updated historical watershed information with data including major recorded storms and floods, monthly and annual inflow volumes, monthly inflow frequencies, historical evaporation and precipitation data, water quality sampling, area population growth, agricultural production, and employment numbers.</p>		
Highlights <ul style="list-style-type: none"> • OEI Role: Prime • Prime Contract: W9126G-15-D-0011 • Task Order: W9126G17F0105 • Percent Complete: 100% (base and two options) • OEI Federal Business Line Categories: Water Resources • Water Control Manual Development • Hydraulic Structures • GIS

CAMPUS PARKING, DRAINAGE, AND SLOPE STABILIZATION IMPROVEMENTS (SHREVEPORT, LOUISIANA)	Overton Brooks Veteran Affairs Medical Center	2016 - 2017
<div data-bbox="142 268 954 604">  </div> <p data-bbox="142 625 967 762">To solve its parking, drainage, and slope stabilization issues on five separate projects broken into two groups around the campus, the Overton Brooks Veterans Affairs Medical Center (OBVAMC) engaged OEI to design improvements, prepare drawings, and provide construction phase services.</p> <p data-bbox="142 804 967 1014">OEI provided design services, construction drawings (with AutoCAD 2015), team management, QA/QC throughout the project, and cost estimates at each design phase (25, 65, 95, and 100%) with the appropriate contingency level per the "Manual for Preparation of Cost Estimates and Related Documents." OEI managed the topographic, geotechnical, and utility surveys as well as the PVC drain line CCTVing.</p> <p data-bbox="142 1056 967 1371">Parking Lot and Drainage Remediation: A patient parking lot had experienced pavement damage from apparent groundwater seepage beneath and through the pavement. OEI designed a level subgrade with perforated pipe drains to safely capture and transfer groundwater from beneath the pavement; approximately 7000 sf of pavement and subgrade was replaced. There was significant erosion at the flume outfall of this portion of the parking lot. This flume was replaced with a curb inlet and a pipe that discharges further down the hill. A riprap pad was provided to protect against scour.</p> <p data-bbox="142 1413 967 1686">Slope Stability: Four areas experienced slope stability issues including damaged flumes. In one location, a drain pipe had been damaged due to the slope failure. In another location behind a building, past slope failures had damaged the water main and threatened the gas main. And in another location, there had been two substantial slides and future instability was threatening two nearby buildings, a storm sewer, and parking lot infrastructure. OEI prepared the design to the stabilizations and repairs. Between both slopes, approximately 650 feet of slope was stabilized.</p> <p data-bbox="142 1728 967 1864">OEI is providing Construction Phase Services (CPS) to include assistance with questions, requests for information (RFIs), clarifications and addendums, and review/coordination of contract modifications/change orders during the construction solicitation phase.</p>		
<div data-bbox="987 268 1466 310"> Highlights </div> <ul data-bbox="1027 321 1466 1182" style="list-style-type: none"> • OEI Role: Prime • Prime Contract: VA256-16-C-0135 • Percent Complete: 100% (Design); 100% (CPS) • OEI Federal Business Line Categories: Facilities, Infrastructure, Water Resources • Design: Civil, Geotechnical, Electrical • Cost Estimating • Drawing Preparation • Construction Phase Services • Testing • Phased Improvements to Minimize Impacts to Patients, Staff, and Visitors • PPQ ratings/comments include Exceptional ratings across the board in Management / Personnel / Labor, Customer Satisfaction, and Safety / Security. Exceptional and Very Good ratings in Schedule/Timeliness, Cost and Financial Management, and Quality.

AIR AND MARINE OPERATIONS CENTER FACILITY DESIGN RECONFIGURATION (MARCH AIR RESERVE BASE, RIVERSIDE, CALIFORNIA)	USACE/CBP	2017 – 2018
	Highlights <ul style="list-style-type: none">• OEI Role: Prime• Prime Contract: W9126G-15-D-0011• Task Order: W9126G17F0205• Percent Complete: 100% (Design); CPS TBD• OEI Federal Business Line Categories: Facilities, Infrastructure, Support Services• Top Secret – Sensitive Compartmented Information Facility (SCIF)• Secret Level Activity Space• Full Design• Electrical Power Supply Study• Construction Phase Services• Life Safety Design• Mechanical, Electrical, Fire Protection, IT, Security• Architectural, Interior Design	
<p>OEI is leading a full-service A/E team for the performance of services required for the US Customs and Border Protection, Air and Marine Operations Center (AMOC) Renovation Design for the reconfiguration of several structures at March Air Reserve Base. Established in 1988 to serve as the nation’s state-of the-art law enforcement Radar surveillance center operating 24 hours a day, 7 days a week to protect the people and the nation’s critical infrastructure through the integration of air and marine forces, the AMOC serves to detect, interdict, and prevent acts of terrorism and the unlawful movement of people, illegal drugs, and other contraband towards and across the borders of the United States. Renovations at the existing AMOC Facility will serve to convert the facility into a secured area. Deliverables include a full design package to include drawings, specifications, and a design analysis. The scope includes two options (which have already been executed): an electrical power supply study and construction phase services.</p> <p>The scope includes renovation of approximately 10,000 sf in the AMOC, a main building, and one modular building, utilizing detailed room by room descriptions of renovations and space repurposing provided by others. This task order provides expanded intelligence work space for Top Secret (Sensitive Compartmented Information Facility (SCIF)), Secret level activity space, and general-purpose administration space. Because the project will be in an occupied facility, there is to be no down time or loss of mission effectiveness in the areas not under contract.</p> <p>Work includes interior and exterior alterations to SCIF walls, doors, ceilings, windows, and access/circulation, as well as mechanical, electrical, lighting, fire detection, alarm and suppression systems, as well as building access walkways and ramps, intrusion detection, access control, and security camera system upgrades to meet current functional requirements, codes, and standards. The work also includes some new furnishings and equipment as well as IT alterations and equipment. Renovations are occurring in two main phases, with some sequencing within each phase.</p>		

Title and Location	Client	Dates
CAMPUS WATER SYSTEM UPGRADE (TUCSON, ARIZONA)	Southern Arizona Veterans Affairs Health Care System	2013 - 2017
<div data-bbox="142 275 954 562">  </div> <p data-bbox="147 590 967 1077"> OEI provided A/E design and full construction documents on this water system upgrade. The Southern Arizona Veterans Affairs Health Care System (SAVAHCS) comprises a campus of 86 buildings on 116 acres. The facility traces its roots to 1928, with much of the original infrastructure still in use. A comprehensive schematic of the entire system was needed. The water system needed improvements to satisfy numerous demands, including the need to evaluate station water budget, identify losses indicating the likelihood of substantial leaks, improve system reliability, keep pace with technological and regulatory standards, and follow the VA's Department-wide commitment to reduce waste, improve efficiencies, and conserve resources (E.O. 13514). The resulting water system upgrade satisfied The Joint Commission's (JCAHO/TJC) 2009 Standard EM.02.01.01, EP 3, to establish response procedures when local community cannot support the hospital. </p> <p data-bbox="147 1123 967 1434"> OEI evaluated the existing system and The JCAHO/TJC 96-Hour Rule and provided systems recommendations, schematic design, design development submission, construction documents, final design submissions (including replacement of 300 feet of waterline near the water towers, replacement of 300 feet of waterline near Building 30, replacement of approximately 300 feet of waterline near Building 40, replacement of 10 water valves, replacement of two booster pumps, addition of a third pump for redundancy, replacement of the existing booster pump controller), and construction period services. </p> <p data-bbox="147 1480 967 1818"> A primary challenge was to identify and locate existing system components from unreliable, outdated documentation. Issues were mitigated by on-site visits and assessments, review of as-built and record drawings to determine required information, and interviews with key station personnel. OEI designed water line and valve replacements, upgraded pumps, and conceptualized the plan forward to help the station meet the 96-Hour Rule requirements while improving reliability. Because some areas have proven to be more difficult (since they are unmapped), the SAVAHCS and OEI developed a follow-on contract to isolate parts of the system to facilitate the repairs. </p>		
<div data-bbox="980 268 1468 1824"> <div data-bbox="980 268 1468 310"> Highlights </div> <ul data-bbox="1029 317 1468 856" style="list-style-type: none"> • OEI Role: Prime • Prime Contract: VA258-13-C-0087 • Percent Complete: Design 100%, CPS 100% • OEI Federal Business Line Categories: Facilities, Infrastructure, Water Resources • Design: Civil, Mechanical, Electrical • Drawing Preparation • Construction Phase Services • Cost Estimating • The Joint Commission compliance • CPARS ratings: Quality, Schedule, Management, and Regulatory Areas all rated Very Good </div>

FACILITY CONDITION ASSESSMENTS OF DEFENSE LOGISTICS AGENCY FACILITIES, SAN DIEGO AREA, CA	USACE/DLA	2018
	Highlights	
<p>Under a USACE Fort Worth District IDIQ contract (W9126G-15-D-0011, Task Order W9126G18F0083) serving the Defense Logistics Agency (DLA), OEI led a multidiscipline Architecture/Engineering team on-site to provide a Facility Condition Assessment (FCA) of over 30 buildings and associated facilities at three DLA compounds in the San Diego area. The OEI team assessed approximately 1,000,000 square feet of buildings and over 20 acres of paving and fencing. Providing logistical support to DoD agencies, the facilities include fuel storage, transmission, industrial plants, distribution facilities, warehouses for bulk storage and material distribution and reutilization, and administrative office space.</p> <p>FCAs included buildings, roofs, and outdoor facilities (pavement and fencing). Building assessments included foundations, basement construction, superstructure, exterior enclosures, roofing systems, interior construction, stairs, interior finishes, conveying, plumbing, HVAC, fire protection, electrical, equipment, furnishings, special construction, and site improvements. BUILDER was used to document the conditions and manage assets. Roof assessments included direct observation, where it could be done safely, and pole mounted camera assessment for sloped roofs and inaccessible locations.</p> <p>BUILDER Sustainment Management System and its field tool BUILDER Remote Entry Database (BRED) was used for building the facility inventory and documenting the facility conditions. BRED output was used for quality control to ensure all facilities were assessed and that the assessments were internally consistent and correctly documented. Life safety issues were noted on special forms for more rapid resolution.</p> <p>OEI led the team of 16 assessors and managers in the field, including architects and mechanical/plumbing, electrical, and civil engineers. The OEI team ensured compliance with regulations and protocols, including Antiterrorism and Operation Security and the USACE 385-1-1 safety manual. Deliverables included a Quality Control Plan (QCP), Safety and Health Plans per USACE 385-1-1, FCA photos, Draft Package (BUILDER report, plus all associated supporting materials including photos, calculations, Eagle View Technologies roof reports, In brief/Out brief reports, sketches, GIS data, and walk sheets), and the Final Package and these will be uploaded in the BUILDER Sustainment Management System (SMS) database.</p>	<ul style="list-style-type: none">• OEI Role: Prime• Prime Contract: W9126G-15-D-0011• Task Order: W9126G18F0083• Percent complete: 100%• OEI Federal Business Line Categories: Infrastructure, Support Services• BUILDER assessments• OEI coordinated 16 assessors in the field• 30 buildings and facilities• Assessments included buildings, roofs, infrastructure (civil components), plumbing, electrical, HVAC, fire protection, architectural components, mechanical• Completed the assessments in half the time, in part due to innovative approaches to roof assessments, which resulted in what is now a patent-pending device• CPARS ratings: Exceptional in Management, Exceptional in Schedule. <i>[OEI's] "management of their FCA team resulted in an on-time and complete delivery in spite of a compressed and rigid site visit schedule. This was displayed in their flexibility in meeting the customers rigid visit schedule. This could not have happened without a knowledgeable and agile management team."</i> – on Management; <i>[OEI] "accelerated the schedule to complete the FCA five days early and started just days after the award. Their efforts exceeded expectations in responsiveness to schedule needs. All reviews on time or sooner."</i> – on Schedule.

RATCLIFF DAM ASSESSMENT AND REHABILITATION (LUFKIN, TEXAS)	USDA Forest Service	2017
	Highlights <ul style="list-style-type: none">• OEI Role: Prime• Prime Contract: AG43ZPC170001• Percent Complete: 100%• OEI Federal Business Line Categories: Infrastructure, Water Resources• Evaluating stream stability• Stream restoration and rehabilitation design• Developing stream stabilization and construction plans• Flood studies in steady and unsteady state HEC-RAS• State and federal submittals, permitting, and compliance• Dredging• Hydraulic and hydrologic modeling and analysis• Stream geomorphology• Erosion risk and problem area identification• GIS analysis and database development• Field reconnaissance• Field review and evaluation• Conceptual project solutions• Cost estimates• Analysis and design of hydraulic structures• PPQ ratings: Very Good on Quality, Schedule / Timeliness of Performance, Customer Satisfaction, Management / Personnel / Labor, Cost / Financial Management, and Security / Safety	
<p>The U.S. Forest Service (USFS) (Department of Agriculture) engaged OEI to provide engineering services to investigate and determine the extent of damage and efforts required to repair the dam and spillway at Ratcliff Dam/Ratcliff Lake, located in the Davy Crockett National Forest, Ratcliff Recreation Area. OEI performed a feasibility study, including site observations and damage assessment, and subsequently provided repair options and a summary submittal of the discussions. OEI was then selected to develop designs for the dam rehabilitation, providing complete designs including a construction-contract ready package of plans, specifications, and cost estimates. The scope included designs and construction administration for repairs to the dam, spillway, and downstream channel, as well as the access road for maintenance and future repairs. OEI also provided erosion control plans, 404 permitting, and Texas Commission on Environmental Quality (TCEQ) coordination.</p> <p>OEI analyzed the existing hydraulic structure (spillway and dam) to determine if it met TCEQ and USFS design requirements, determining the dam needed upgrading. Water depth analysis and velocities were performed at the transition between the spillway outfall and creek channel. Roadway culverts were designed along the maintenance road to handle local drainage. OEI designed the concrete spillway and grouted riprap flume, including structural design of concrete flatwork and training walls.</p> <p>The earthen dam embankment is composed of clayey sands with some permeability. The geotechnical engineer performed a seepage analysis as part of the design of spillway cutoff walls. A slope analysis was performed to assess the ultimate stable slope of the embankment and address shallow sloughing along the downstream face of the dam.</p> <p>OEI used ArcGIS for all base map generation, hydrology delineation, and inundation area mapping. Historic data was georeferenced to survey data and georeferenced aeriels. TCEQ’s Gridded PMP Tool was used to determine basin rainfall totals for the spillway adequacy assessment. Base maps were developed using aerial photographs, traditional land surveying, photogrammetry contours, scanned and vectorized historical plans, georeferenced historical maps and plans, and USFS GIS data, for the watershed entering the lake, and the dam breach inundation area downstream of the lake.</p>

USACE FORT WORTH DISTRICT'S MEMORANDUM OF RECORD FLOODS 2015 – 2016 (TEXAS)	USACE Fort Worth District	2016-2017
		Highlights <ul style="list-style-type: none">• OEI Role: Prime• Prime Contract: W9126G-15-D-0011, Task Order 0006• Percent complete: 100%• OEI Federal Business Line Category: Water Resources• Hydrologic and hydraulic modeling• HEC-MetVue and ArcGIS• Multiple federal and state agency coordination• CPARS ratings: Very Good (Management)• Customer comment: <i>“This task order required substantial coordination with a number of different agencies and piecing the data from these different agencies into one usable format of data. This required more than just normal effort and the contractor accomplished it and should be commended for doing that. [OEI] completed the contract on time and on budget. They also printed additional copies of the final report at no cost. They coordinated between several agencies when collecting data for the report, e.g. USACE, NWS, USGS, FEMA, and the Harris County Flood Control District. Coordination among this many agencies can be problematic, however they executed this task very well. The final report is of excellent quality and an improvement over past floods reports produced by the Fort Worth District.”</i>
<p>OEI was engaged to develop a comprehensive memorandum, <i>Memorandum of Record Floods of 2015 – 2016</i>, for the USACE Fort Worth District’s Water Resources Branch. OEI delineated watersheds based on USGS gage placements within major river systems in Texas. Services provided included project management, writing, editing, organization and coordination of a multi-agency project effort.</p> <p>Upon completion of the investigations and studies, OEI prepared and furnished reports and other data, and supporting materials that described the floods experienced in Texas during the years 2015 and 2016 in the Trinity, Guadalupe, Nueces, Brazos, Colorado, Lavaca/Navidad, Red, San Jacinto, Neches, and Sabine River Basins. The Fort Worth District partnered with the National Weather Service (NWS), the U.S. Geological Survey (USGS), and the North Central Texas Council of Governments (NCTCOG) as part of this effort. The NWS, NCTCOG, and USGS contributed information that OEI incorporated in the report, along with details about each agency and how the agencies worked together during the flooding events. The report included information on Fort Worth District lake levels, operational aspects of lake operations, peak stream and river flows, and storm rainfall data. It also included information on damages prevented from Fort Worth District lakes, as well as available state-wide damage information.</p> <p>HEC-MetVue was utilized to develop hyetographs over a given watershed using hourly rainfall data obtained from NOAA for a chosen time period. The resulting hyetographs were then compared to the stream stage-discharge data provided by the USGS. Additionally, OEI developed a condensed version of the report using Esri StoryMap, a web-based platform.</p> <p>The report included individual, specific flood event chapters, graphs, plots, maps, exhibits, tables, and research data. Additional scope of work items included providing editorial support, printing, and preparation of electronic files and paper documents. The maps were produced using ESRI ArcMap showing monthly precipitation totals for several months during the flooding using gridded daily rainfall data from NOAA.</p>

FORT SAM HOUSTON NATIONAL CEMETERY ADMINISTRATION (NCA) SURVEYS (SAN ANTONIO, TEXAS)	USACE Fort Worth District	2016-2017
<div><div></div><p>OEI performed field topographic, planimetric, tree, and utility surveys, office computations, and 3D digital mapping of a defined area at the Fort Sam Houston (FSH) National Cemetery (NCA), within and, in part, around the Veterans Affairs (VA) property in San Antonio, Bexar County, under two task orders. These task order are off one of OEI’s IDIQ contract with the USACE Fort Worth District; USACE provided contract management to the NCA on this project. The survey area totaled approximately 65 acres, split into seven areas throughout the VA cemetery. OEI obtained geographic information and elevations for all ground locations and structures. This data was incorporated into the facility mapping and survey controls. OEI coordinated with the VA to enter the site, including active areas of the cemetery.</p><p>A portion of the survey area is owned by the City of San Antonio Parks Department. This property is to be acquired for a new facility entrance. OEI arranged surveyor right of entry with the City, and provided survey data for use in property acquisition, planning, and design.</p><p>Existing survey control monuments were used where available. OEI established new control monuments where needed, and were documented per EM 1110-1-1002 Survey Markers and Monumentations. OEI performed property research to locate utility information, including as-builts and GIS data. This was combined with the site survey to establish the utility locations. Details of utility poles and manholes were recorded and documented with photos. Communication vaults were also documented using butterfly sketches of the incoming and outgoing cable banks. Survey drawings were provided in AutoCAD using the Tri-Services A/E/C Release 5.0 standards, and client-specified naming conventions.</p><p>OEI performed the survey in accordance with USACE Engineering Manuals: EM 385-1-1 Safety and Health Requirements, EM 1110-1-1002 Survey Markers and Monumentations, EM 1110-1-1003 NAVSTAR Global Positioning System Surveying, EM 1110-1-1005 Control and Topographic Surveying, and ER 1110-1-12 Quality Management. OEI prepared a Work Plan, Quality Management Plan, and Safety Plan to help ensure compliance with USACE standards and to successfully manage the work and provide a quality product within the tight schedule. Deliverables included AutoCAD files of survey data and surface information, point files, field notes, Geodetic Control Station Forms and U-Smart forms, utility sketches, photographs and checklists.</p></div> <div>Highlights<ul style="list-style-type: none">• OEI Role: Prime• Prime Contract: W9126G-15-D-0011• Task Order: 0001 and 0008• Percent Complete: 100%• OEI Federal Business Line Categories: Real Estate, Support Services• CPARS rating: <i>Very Good</i> (Quality)• Customer comment: <i>“The initial draft submission was very good...it was very near a corrected final.”</i></div>

GREEN HOUSE CONCEPT COMMUNITY LIVING CENTERS SITE DEVELOPMENT & ENVIRONMENTAL PERMITTING (TOMAH, WISCONSIN)	Tomah Veterans Affairs Medical Center	2016-2017
<div><div></div><div><p>At the Tomah Veterans Affairs Medical Center (Tomah VAMC), OEI provided site civil engineering including drainage design for the second phase of A/E design services for two of the green homes included in the Green House concept Community Living Center. The primary focus was to develop a series of facilities that accommodated more than 50 veterans within the complex.</p><p>OEI is providing road, driveways, and parking lot designs for new construction, utility extensions to serve the new buildings, and designed the relocation of two water quality/detention ponds. Because the site is a VA Life Protected Facility, the site civil design was performed to comply with the Physical Security Design Manual (Jan 2015).</p><p>The existing ponds were combined and modified to serve the new construction. The water quality ponds were necessary to meet EPA and VA guidelines, as well post-construction BMP requirements necessary for a Water Resources Application through the Wisconsin Department of Natural Resources. These BMPs were intended to remove Total Suspended Solids, detain peak runoff rates, and allow for infiltration.</p><p>Additionally, OEI prepared plan sheets and specifications using CADD program Civil 3D and prepared and submitted environmental permitting documents. OEI provided bid phase assistance and construction administration services.</p></div></div>		
<div>Highlights</div> <ul style="list-style-type: none">• OEI Role: Subconsultant• Percent complete: 100%• OEI Federal Business Line Categories: Facilities, Infrastructure, Water Resources• Phased improvements to minimize impacts to patients, staff, and visitors• Evaluating drainage systems and developing alternative solutions• Localized hydrology and hydraulics• Development of construction plans• Environmental permitting• Water quality• Detention pond design• Multiple regulatory guideline compliance

FEMA SUBSTANTIAL DAMAGE ESTIMATES (SDE) IN FLOOD IMPACTED COUNTIES (LOUISIANA)	FEMA	2016
	Highlights <ul style="list-style-type: none">• OEI Role: Subconsultant• Percent Complete: 100%• OEI Federal Business Line Categories: Support Services• Substantial Damage Estimator (SDE)• FEMA’s Substantial Improvement• Substantial Damage Desk Reference Manual• Flood damage estimates• BCA Tool• Post disaster preliminary damage assessments• Substantial Damage Assessment reports	
<p>Severe storms and flooding impacted many counties in Louisiana in 2016 and as a result, thousands of structures were damaged or destroyed, presenting an immediate threat to the health and safety of the public. These threats left local officials overwhelmed in performing their essential community services to deal with thousands of non-conforming structures. To alleviate the threat, local officials needed to evaluate the damage state of these structures and enforce FEMA’s National Flood Insurance Program (NFIP) requirements for bringing substantially damaged structures into compliance. As a subconsultant, OEI provided assistance by collecting data for use by local communities for making Substantial Damage Determinations / Estimates (SDEs) of affected residential and non-residential structures, as required by the NFIP. FEMA’s Substantial Damage Estimator 2.2 tool was used to collect the data. Data captured was intended to be used by local communities or the Federal Government for rebuilding, building code compliance, investigations, surveying, evaluations, consultations, comprehensive planning, program management, conceptual designs, plans and specifications, value engineering, and construction phase services. OEI personnel conducted over 2500 SDEs over a six-week period, working six days a week, 12-14 hours per day in multiple counties in Louisiana, working with FEMA and the prime contractor. OEI completed the SDE 2.2 Inspection worksheet and provided: damage inspection data entered into a SDE software database, digital photographs documenting damage and importing them into the SDE database, accurate GPS coordinates, community summary reports, a geo-referenced file, and a final report of the results of the SDE Collections (external to the SDE Estimation tool) which was provided to the Joint Field Office in Louisiana and the Region 6 FEMA Office in Denton. OEI complied with the 29 CF 1910 Occupational Safety and Health Standards and 29 CFR 1926 Safety and Regulations for Construction.</p>

FEMA HAZARD MITIGATION TECHNICAL ASSISTANT PROGRAM GRANT REVIEWS (VARIOUS)	FEMA	2016
	Highlights	
	<ul style="list-style-type: none">• OEI Role: Subconsultant• Percent Complete: 100%• OEI Federal Business Line Categories: Water Resources, Support Services• Flood Hazard / Risk Reduction Reviews• Hazard Mitigation Assistance (HMA)	
<p>To provide technical assistance and support to FEMA in performing reviews of Hazard Mitigation Assistance (HMA) program applications under the Pre-Disaster Mitigation and Flood Mitigation Assistance programs, OEI was engaged as a subconsultant to serve on-site for four weeks during 2016. OEI provided support in conducting cost effectiveness and feasibility reviews, on primarily flood risk reduction reviews, for HMA grant applications. OEI functions included conducting feasibility reviews, benefit/cost analysis reviews, and summary reporting. Feasibility reviews involved verifying that all technical information submitted in support of the application complied with applicable codes and standards, regulations, and guidance, and verification of assumptions. Benefit Cost Analysis (BCA) reviews involved confirming that the documentation provided ensured all requirements of guidance was met; evaluation of the general analysis approach including a review of principal BCA parameters, such as hazard data, data regarding the facilities to be protected by the project, historical losses, and the useful life and projected level of protection for the project; and, reanalysis when possible to correct any errors made. The BCA reviews were performed within the standards of the FEMA BCA Tool or other FEMA approved methodology. Finally, the Summary reporting included conclusions from the programmatic, feasibility, and BCA reviews, including a verified benefit-cost ratio and all supporting documentation.</p>
