

O'BrienEngineering, Inc.

OEI has been serving our North Texas area municipal customers for as long as we have been in business, over 30 years. We have served dozens of local municipalities, primarily providing surface water analysis and drainage design: hydrology, hydraulic, and hydrodynamic modeling and analysis; storm sewer system design and remediation; streambank stabilization and erosion control; floodplain management; watershed studies; regulatory permitting; and GIS services. We offer our clients a long history of local experience and knowledge. Our municipal experience is primarily within the DFW metroplex so, we understand and are very familiar with our area's unique characteristics: watersheds, topography, soils, climate, and regulatory agencies. This knowledge, combined with the fact that all our experts are local, means that OEI is positioned to serve our municipal clients with precise, efficient, and responsive results. Today, we are a **multidisciplined architect/engineering firm** with a full spectrum of expertise in-house.
