## WATER RESOURCES

Founded in 1987 as water resources firm, OEI remains true to our core competency decades later, providing a deep experience record of hydraulic, hydrologic, and hydrodynamic projects. OEI's clients seek us to analyze and design resolutions for floodplain, flooding, drainage, erosion control, dam and levee safety and rehabilitation, streambank and creekbank stabilization issues, regulatory permitting navigation proficiency, and more. We provide full design, analysis, studies, modeling, forensics, and, as relevant, construction phase services of complex problems with expert knowledge and efficiency.

Since OEI has been resolving surface water issues for nearly 35 years, we have developed efficiencies in streamlining the permitting processes and developing relationships with and a reputation among regulatory agencies, deftly navigating and working within the parameters of the complex regulatory process.

Representative municipal and federal projects, not including hundreds of private projects:

- Hackberry and Turtle Creeks Master Planning (Highland Park)
- Chisholm Trail Retaining Wall (Plano)
- Cooks Creek Channel Improvements and FEMA Grant Support (Farmers Branch)
- Carrollton Floodplain Management
- Overton Brooks VAMC Slope Stabilization (Shreveport (LA))
- USACE Fort Worth (SWF) Flood Memorandum for 2015-2016 Floods (TX)
- Storm Water Master Plan (Corinth)
- Dallas Love Field Drainage Channel Cover
- Downtown Drainage Analysis and Remediation (Garland)
- Master Flood Study and FEMA CTP Mapping (Grand Prairie)
- USACE SWF Water Control Manuals (TX)
- Streambank Stabilization and Erosion Control, Five Locations (Dallas)
- USACE SWF Cedar Creek Watershed Flood Study (Bastrop County)
- Cooper Creek Erosion Control (Denton)
